

NEXIQ Blue-Link™ Mobile Vehicle Interface

The NEXIQ Blue-Link is a mobile vehicle interface that enables you to use either your iOS or Android devices (e.g., smartphones or tablets) to communicate with your buses for quick access to basic diagnostic information. It plugs into the vehicle's diagnostic connector, and provides wireless communication with on-board electronic control units.

USE YOUR MOBILE DEVICE TO MAKE THE CONNECTION!

When used in conjunction with First-Link™, the new mobile app from NEXIQ Technologies, the NEXIQ Blue-Link becomes a triage tool for drivers and service technicians. First-Link provides features that help drivers and technicians connect their mobile devices to the vehicle's diagnostic port; they also monitor the vehicle's health status and increase the vehicle's uptime. If, for example, a Check Engine Light is illuminated, the app assists the driver to understand the cause so that he can seek assistance if needed (i.e., service and repair). Later back at the shop, service technicians can utilize the information gathered by the application to aid in vehicle service and repair.

First-Link™

First-Link is available on the App Store and on Google Play.
